Petunia Grandiflora Fringed White Mound

LARGE FLOWERING COMPACT SINGLE FRINGED

This type, of dwarf compact growth, is especially suited for pot growing and may be also used for bedding.

WORTHWHILE NOVELTIES

White Mound. This is an introduction of last year. Our trials this season again impressed us with its worth. The pure white flowers are heavily fringed, of medium size and are produced in abundance throughout the season. The habit is compact enough for pots but the plants have plenty of vigor to stand up for bedding.

Rose Mound. New this season, this is similar in all respects except that the color is a brilliant rose shade quite similar to Setting Sun.

Price of the above two varieties —
Pkt. \$0.75; 1/64 oz. \$1.90; 1/32 oz. \$3.50

NEW HYBRIDS

Tango. Improved over last year, the slightly fringed flowers are uniformly large. The rich salmon red color has been intensified. Being a hybrid, it is better than Carmencita for bedding because it has more vigor, yet it may also be used as a pot plant.

Bolero. Also improved, this variety produces very large ruffled and fringed blooms of a rich rose shade. The plants are uniformly dwarf and compact. Outstanding as a pot plant or in the garden. More vigorous and much larger flowered than Setting Sun.

La Paloma. This might well be called Fringed Snowstorm and it should take the place of that variety which lacks vigor. The flowers are uniformly large and the growth is vigorous yet compact. An especially fine variety for an Easter pot plant.

Price any of the above three varieties —
Pkt. \$2.50; 1/128 oz. \$5.00; 1/64 oz. \$9.00

Primarily for bedding and garden planting, however, the tall growing classes all make excellent cut flowers outdoors and under glass. A January sowing spaced 4" x 4" grown in shallow benches or flats, to a single stem, can be expected to flower in May.

The dwarf varieties are nice for pots or bands, and the miniature varieties like Spry and Sunkist, because of their early bloom, are very popular for spring sale out of flats.

*Snap*s for Greenhouse Forcing

ORIGINATOR'S STRAINS

Modern varieties have really "snapped" this flower back into popularity. There are few flowers that are as profitable for the greenhouse grower. With proper selection of varieties and variation of sowing dates, it is possible to have flowers almost the entire year. There is a good market in June and July, especially for white, that is not now being adequately supplied.

THE HYBRIDS

Uniform, free flowering, hybrid vigor, all go to making an article that is profitable to grow. Because of the extra vigor, it is best to be careful that you do not overfeed.

Better Times. One of the older hybrids. The color of the Better Times rose and the habit of Christmas Cheer. 1/2 Pkt. \$1.25; Pkt. \$2.00

Christina. Bright pink shade somewhat deeper than Mary Ellen. It is earlier than Mary Ellen and the flowers are larger and more closely spaced. — **Sold Out Until June**

Christmas Cheer. The popular variety which is now the standard rose pink.

Dorcas Jane. Fine soft pink.

Fringed White Snow. Pure, clear white. Best for midseason to late.

Indian Summer. Medium bronze lighter than Lady Dorothy.

Jubilee. By the introducer of Maryland Pink. A light golden bronze shade with overtones of pink. Has large individual florets and a large full spike. (Seed ready July 1st.)

Mary Ellen. Popular silvery pink. 1/2 Pkt. \$1.50; Pkt. \$2.50

Maryland Pink. Early pastel pink.

Mountain Pink. Clear, rose pink similar to Cheviot Maid. Slightly later than Christmas Cheer. Vigorous clean grower.

Patricia. Vigorous yellow. Habit of growth similar to Margaret but blooms earlier.

Gold Mine. A rich sparking yellow, much superior in flower, stem and production to the old favorite Ethel. We consider it one of the best yellows.

Gold Rush. Quite similar to the above, except that it is several shades lighter in color.

Red Wing. Deep velvety red with true hybrid vigor. (Seed ready June 1st.)

Rockwoods Early Pink. Pastel pink good for the entire season.

KATHLEEN

New all year variety. Color is similar to Mary Ellen but we consider it better in all other respects. The remarkable feature is that it can be flowered during the summer months when other varieties will not produce good blooms. This in no way effects its winter flowering habit. Summer snaps are a profitable and worth while crop and with this variety, you can get a good cut in August which will be followed by another good cut in late November. (Ready June 1)

Sunglow. This was the first bronze hybrid. It has been under test for several years and we think highly of it. The color is a golden bronze shade, and it breaks freely and flowers early and throughout the winter.

Prices any of the above hybrid Snapdragons, unless noted — 1/2 Pkt. \$1.75; Pkt. \$3.00

Delphinium

(12,000 seeds per oz.)

Popular and profitable, they may be used both for cut flower purposes and garden use. The belladonna type with its loose flower arrangement is the more popular for cutting whereas the hybrids and the Chinese type are mostly used for garden planting. The Pacific Hybrids are an exception as some of the finest cut flower material is obtained from this strain. Most of the plants, in all types, will flower in August from a March-April sowing. These one year plants are the best to use for forcing under glass after being well cured by freezing.

Florist's Stocks

(19000 seeds per oz.)

This important cut flower assumes even greater importance as labor and other costs rise. They are best grown in a temperature of 50-60 degrees. Sowing direct into the bench where they are to bloom makes for stronger, more vigorous plants. Rows are usually made 6 inches apart and the plants are thinned to stand approximately 3 inches. Selection of the stronger seedlings will have a tendency to increase the percentage of doubles. Proper feeding with greenhouse Vigoro or Hy-Gro (every two weeks until buds form) will be found beneficial and greatly improve the quality.

SOMERSET'S

Perennial Flower Seeds

There has been a brisk demand for the better perennials during the past few years, and the supply has been inadequate. The cut flower value of some items is considerable, and it is often available at a time when other cut flowers are in short supply.

Seed is a cheap and quick way to obtain a stock of many items. Some items are tricky to germinate satisfactorily, but most can be easily raised when sown in early spring, either in the greenhouse or cold frames. Light freezes will not harm most items, and best results are obtained while the weather is cool.

Midsummer sowing is recommended by some authorities, and the seed of many items can be germinated successfully at that time. Greater care, however, is necessary, as weather conditions are less favorable, and under hot humid conditions, results are often unsatisfactory. We shall, at all times, endeavor to give you seed of the best possible strains and viability.

with seeds — Sow in sterilized soil. Germination will be improved, damping off and weeds practically eliminated.

We recommend preparing your soil for sowing and transplanting well in advance. Treat with carbon bisulphide at the rate of 2 lbs. to a cubic yard — plus formaldehyde at the rate of 6 lbs. (2/3 gal.) to the cubic yard.

Water the freshly sown seed with Yellow Cuprocide (1 oz. and water 3 gallons). This same solution will control damping off and mildew.

All of these items are offered in the listing, Pages 55 to 58 under insecticides.

When Ordering Mum Cuttings

Please indicate the earliest date delivery will be acceptable and the maximum number of cuttings that can be handled in a shipment.

Our growers suggest — **for the best service** and in order **to assure delivery of cuttings when you want them**, it is necessary to have your order **at least six months in advance of shipping date**. Orders on shorter notice will receive the best possible attention. Changes or cancellations must be received at least thirty (30) days before shipment.

Where we are unable to ship very close to the requested delivery date, we will advise you of our grower's best estimate of delivery. We suggest that you advise whether substitutions will be acceptable, when giving the order.

Fifty (50) rooted cuttings of a variety is the minimum that can be supplied. More than fifty (50) of a variety must be in multiples of 50.

Shipments will be sent Railway Express unless otherwise instructed.

When shipments arrive in an unsatisfactory condition for any reason — Notify your Express Agent at once and have him mark on your express receipt the condition of the shipment or give you a "Joint Inspection Report." Mail this to us with your complaint. We will then adjust the matter to your full satisfaction.

All cuttings will be taken from plants apparently free of "Stunt" the previous season. **We cannot be responsible for any cuttings where this difficulty may develop.**

Some garden and early shading varieties require very little short day treatment and high temperatures to set buds. To prevent this, use 60 watt bulbs spaced 4 feet apart and 30 inches above the plants.

Use this table to determine quantity prices.

Prices are for the number of one variety ordered, **for one specific delivery date** and not for the total number of the order.

Tree Roses

We will have available a limited number in Red-Pink-White-Yellow-Bicolor. **\$3.00** each; 10 or more **\$2.75** each; 30 or more **\$2.65** each.

Peace and Crimson Glory at **\$0.50** additional.

Potted Roses bring premium prices. You cut your losses, extend your selling season, and give more customer satisfaction.

Cloverset Pots are practically standard for this purpose. The No. 2 size is used mostly for roses although No. 1 is satisfactory especially if you can turn your stock quick enough. See page 64 for prices.

Directions are simple. Cut your roses back two thirds, taking out all thin branches. Pot firmly using a soil containing at least one quarter rotted cow manure or peat. Pack the soil firmly around the roots using a piece of broomstick or hammer handle. Water so that soil is **wet all the way through**, after this keep the soil slightly on the dry side until growth starts. Protect the tops against drying winds and keep moist. Feed with liquid manure or fertilizer when the plants show buds.

Roses are perishable even when dormant. Protect the roots and tops against drying and rapid temperature changes, at all times.
